## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-6 and 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claims disclose an edge detecting means, selecting means, calculation means, enhancement means and an edge enhancing means. The elements performing the function are not disclosed in the specification. The specification does disclose on page 8, line 6 a controller. However, this is insufficient to disclose one controller as all of the claimed means.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagao (US. 6055340).

Regarding claim 7, Nagao discloses an image processing method (fig. 1, col. 6, lines 53-57), comprising the steps of:

determining the presence/absence of an edge at each pixel of input image data (fig. 1, col. 6, lines 64-66);

selecting a weighting matrix corresponding to the position of the edge for each target pixel determined to have an edge (fig. 1, col. 7, lines 60-65 and col. 12, lines 35-60, col. 13, lines 1-34);

calculating data of the target pixel and the pixels surrounds the target pixel using the weighting matrix (fig. 1, col. Col. 11, lines 45-67, col. 13, lines 35-57);

comparing the calculation result to a specific threshold value (fig. 3, col. 14, lines 45-67 and col. 15, lines 1-44; col. 21, lines 27-67);

determining the range of edge enhancement for the target pixel based on the comparison result (fig.3, col. 13, lines 58-67 and col. 14, lines 1-2); and

executing an edge enhancement process for the object pixels within the determined enhancement range (fig.3, col. 18, lines 9-45).

Regarding claim 8, Nagao discloses an image processing method according to claim 7, wherein

The weighting of components corresponding to the interior side of the edge in the weighting matrix is increased in the step of determining the range (fig. 1, col. 11, lines 45-67 and col. 12, lines 1-31)

Regarding claim 9, Nagao discloses a medium readable by a computer storing computer-executable programs comprising the steps of:

determining the presence/absence of an edge at each pixel of input image data (fig. 1, col. 6, lines 64-66);

selecting a weighting matrix corresponding to the position of the edge for each target pixel determined to have an edge (fig. 1, col. 7, lines 60-65 and col. 12, lines 35-60, col. 13, lines 1-34);

calculating data of the target pixel and the pixels surrounds the target pixel using the weighting matrix (fig. 1, col. Col. 11, lines 45-67, col. 13, lines 35-57);

comparing the calculation result to a specific threshold value (fig. 3, col. 14, lines 45-67 and col. 15, lines 1-44; col. 21, lines 27-67);

determining the range of edge enhancement for the target pixel based on the comparison result (fig. 3, col. 13, lines 58-67 and col. 14, lines 1-2); and

executing an edge enhancement process for the object pixels within the determined enhancement range (fig. 3, col. 18, lines 9-45).

### ***Conclusion***

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takamatsu et al.(US. 6233062), Nagao (US. 6628842), Shimura (US. 5886797), Kuwata et al. (US. 6392759) and Ohuchi et al. are cited to show related art with respect edge enhancing process.
